

28 APR 1983

MEMORANDUM FOR: Chief, Personnel Management Staff

FROM:

[redacted]
Deputy Director of Security (P&M)

SUBJECT:

Five Year Age Projection for MS Professionals
(Quarterly Review)

Charlie:

1. Attached herewith is a [redacted] paper prepared in early December 1980 on a five-year projection of the MS age distribution using the BASEON model. [redacted] was kind enough to do this study for us, and he also met with the senior managers in the Office of Security to explain his findings. The Director of Security found this to be a very useful exercise, and the report also came in handy in connection with the 1980-81 Inspector General study.

2. Following our last quarterly review, which included your CIARDS statistics, there was some thought that we might wish to update the 1980 projection, if this can be arranged with the Office of Personnel. There is no sense of urgency on this, but it would be "nice to have" at the next quarterly. I thought I saw [redacted] in the building the other day, and it may be he is deeply involved in more important issues.

3. As the bottom line, can we get something going on an updated study?

The attached paper summarizes our five year projection of the MS age distribution using the BASEQN model. The basic message is that your age distribution looks pretty good. Please let me know if you wish any additional support on this subject.

1 to 2: Attached are the results of the study on age projections in the Office of Security. I read it that we are not in bad shape overall but would suggest that we have brief you and/or all the senior officers on his interpretation of our age statistics. There is no rush and this could be an agenda item if you wish. I think we should give a copy to because there is an experience problem, and this shows we are looking at the situation.
